

Acoustic solutions in the Czech Republic Czech system of environment adaptations makes use of 6-button remote control called Transmitter for the Blind. Each of the buttons has a predefined meaning which will be discussed in detail. There are also standalone features which might not need remote activation like traffic signs or next stop announcements, which will be covered as well. In order for acoustic features to be as helpful as possible, they have to be complemented by tactile adaptations to form a well-thought nation-wide mandatory system.
