

OKEENEA TECH :

Almost everywhere in the world, APS (Audible pedestrian signals) are push buttons. They represent the second generation of APS, but the service provided could be better, especially in a COVID world.

Based on 25 years of experience, OKEENEA TECH developed aBeacon, an innovative APS with multiple on-demand activation, high sound quality voice information, sound corridor, and a full web backend to ease the maintenance by the cities.

We will share the first report of NYC that has chosen to test aBeacon among 45 other solutions.
